## Education

Indian Institute of Information Technology

2022 - 2026

Bachelor of Technology in Information Technology (CGPA : 8.10)

Prayagraj, Uttar Pradesh

## Experience

SwasthiQ

April 2026 – Present

Software Engineering Intern | Next.js, Python, FastAPI, PostgreSQL, AI-scribe

- Built core modules of **Kaagazy EMR**, a full-stack multi-tenant clinical platform featuring AI Scribe, Razorpay billing, role-aware onboarding, and secure credential verification for Indian healthcare providers.
- Developed an **AI Scribe pipeline** that captured live doctor-patient conversations, performed real-time transcription, and generated structured SOAP notes, diagnoses, and prescriptions in under 90 seconds.
- Integrated **Razorpay subscription and billing workflows** with trial activation, recurring plans, AI credit management, GST-compliant invoicing, and webhook-driven payment lifecycle automation.
- Implemented **role-aware onboarding and defence-in-depth credential gating**, including KYC document deduplication, PlatformAdmin verification, and authorization policies for secure clinical operations.
- Deployed the platform on **AWS Lambda with API Gateway, Cognito, S3, and PostgreSQL**, enabling secure multi-tenant data isolation, serverless scalability, and production-ready cloud infrastructure.

Algonive

Jan 2026 – Mar 2026

Software Engineering Intern | JAVA, JSON Serialization, SQL

- Built a **Native Durable Execution Engine** inspired by Temporal/Cadence, enabling workflows to resume from failure without re-running completed side effects.
- Implemented a generic **Step primitive** with SQLite-backed memoization and logical sequence tracking for loops and conditionals, ensuring efficient state persistence and consistent execution across complex workflow scenarios.
- Enabled thread-safe parallel step execution, handling `SQLITE_BUSY` and ensuring atomic RDBMS writes.
- Developed a CLI workflow runner to simulate crash recovery and validate durability across restarts.

## Projects

AI Pull Request Review Agent | FastAPI, LangGraph, PostgreSQL, pgvector, Redis, GitHub Webhooks, OpenAI

Live 

- Designed a **multi-agent AI code review system** that performs parallel security, code quality, testing, and documentation analysis, reducing manual review effort for senior engineers.
- Built a **RAG-powered review pipeline** using **pgvector** to retrieve repository-specific context, enabling accurate and context-aware pull request feedback instead of generic LLM responses.
- Architected an **event-driven workflow** using GitHub Webhooks, Redis queues, and LangGraph orchestration for scalable, asynchronous PR processing with fault-tolerant execution.
- Implemented confidence-based review aggregation with structured findings, audit trails, and human-in-the-loop escalation, helping teams review code faster while maintaining high code quality.

CodeSync – Codeforces Custom Contest Platform | Next.js, MongoDB, Google OAuth 2.0

Live 

- Built a full-stack platform for team-based competitive programming, onboarding **110+ active users** and hosting **540+ custom contests** successfully.
- Developed automated contest generation system with configurable difficulty, rating ranges, and contest duration.
- Built four analytics dashboards tracking users' last **20 contests** to visualize rating trends, performance, and progress.
- Optimized MongoDB queries and Google OAuth authentication, improving backend scalability and response time.

## Technical Skills

**Languages:** C, C++, Java, Python, JavaScript, Python (scripting, data processing, automation workflows)

**Frameworks & Libraries:** React.js, Next.js, Node.js, Express.js, Tailwind CSS

**Databases:** MySQL, MongoDB, Neon (PostgreSQL)

**Tools & Platforms:** Git, GitHub, Postman, Vercel, Inngest, Clerk

**Core Concepts:** Data Structures & Algorithms, OOP, Operating Systems, DBMS, Artificial Intelligence, Machine Learning

## Coding Profile

**Coding Profiles:** Codeforces  | LeetCode  | CodeChef
